Education

- Sep 2006 -- Jun 2010, Tongji University, Bachelor of Engineering in Automation. Overall GPA 4.25/5.0.
-

Experience

- Jul 2010 -- Present, *Embedded software engineer, Cisco Systems.*
Hybrid fiber-coaxial(HFC) products including network management solutions.
Contribute to development of DOCSIS network Cable Modem and related network management system. Have designed and developed a dynamically data collection subsystem which queries core status of different network devices from their independent MCUs or with inner ADCs. Including an embedded, hardware independent C-like expression system aiming at data conversion. Also take part in automatic test station implementation.
-

Specialties

- Networking principles, plus working knowledge of related disciplines, e.g. TCP/IP, HTTP, FTP, computer security, algorithms, database, and operating systems,
 - Background in network management concepts including SNMP, MIB design,
 - Extensive C/C++ programming experience in embedded system development including diagnostics on code and register level,
 - Familiar with Python, VBA, programming skills of Java, ARM/MIPS assembly language, and shell scripts(including Bash, zsh and GNU common tool, such as grep, sed and awk),
 - Hands-on experiences in embedded interpreter implementation with Yacc & Lex (Bison & Flex),
 - Practical skills at Javascript(including common libs such as jQuery and Prototype), and
 - Technical documentation written skill and automatic documentation preparation with LaTeX, Doxygen and Markdown.
-

Professional

- Proficient in MS Office
 - Cooperate with cross-functional team with experience of version control system such as CVS, Git and mercurial(hg).
 - Possessing effective communication skills in both spoken and written English
-
